As follows: Write it down as quickly as possible. You can always come back to fix it later. 6. Taking a look at the save editor. One of the most frequently asked questions I get is, "How do you save the changes you made?" I'll cover that here and provide my advice for the most common situations. If you want a saved game, press (WASD) on Xbox 360, (E) on PC, or (F) on PS3. If you want to reload a save that you just loaded, press (WASD) on Xbox 360, (E) on PC, or (F) on PS3. PS3 and PC save editors also allow you to navigate through your save game in a variety of ways. The goal of this save editor is to make it as easy as possible to make changes in the game. If you're loading a save that you've already made some changes to, the save editor will always remember what you've changed, and the changes you want to make will be highlighted in blue. Step 3: Take a break and think about what you've just done. It is now time to answer some questions. As mentioned in the beginning, any time you play FFTB and select a save to load, the save editor will ask you some questions. This question must be answered for the changes you're about to make to take effect. Answer one question per line, one question per screen. You can exit the save editor at any time by pressing (WASD) on Xbox 360, (E) on PC, or (F) on PS3. Click Yes to save the changes or No to cancel the changes. Depending on your settings, saving will also delete the current saved game. Step 4: Add the new data. When you're ready, select the new data, which should automatically be applied in order to save the data from the original game. You may have to reload your game to see the changes. If you've made any modifications, you'll see them highlighted in red, and you may have to answer one or more questions. I'll be saving them for when I get home, so if you have any questions, feel free to ask below in the comments. To add new data, you must answer one question per line. Be sure to answer the questions in the order that they appear. To exit, click the Save 82157476af
